In 2011, Elke Verbeke has examined the Greek rendering of Hebrew absolute and non-absolute *hapax legomena* in the Septuagint (LXX) version of Job. This examination has indicated that the LXX translator of Job dealt with hapaxes in a variety of ways, that is, omission, transliteration, consistent rendering, association with a similar-looking word, contextual exegesis, approximate translation and paraphrasing. Although Verbeke's study has shed more light on the translation technique of the LXX translator of Job, she has only examined the Hebrew hapaxes and their Greek rendering in the speeches of Job and God. In order to come to a more accurate description of the translation technique of LXX Job, this article has analysed the Greek rendering of Hebrew absolute *hapax legomena* in the speeches of Job's friends. This examination has indicated that the LXX translator of Job has applied a diversity of techniques to deal with Hebrew hapaxes. Therefore, this article has obtained a more complete image of the translation technique of LXX Job.

Contribution: This article fits well within the scope of *HTS Teologiese Studies/Theological Studies* because it focusses on the translation technique of the LXX translator of Job and thus contributes to research regarding historical thought (textual transmission of biblical texts) and source interpretation (because the LXX translator does not only reflect a translational but also an interpretative process).

Keywords: LXX; Septuagint; job; *hapax legomena*; translation technique; absolute *hapax legomena*; hapaxes.

Introduction

From 2006 onwards, a new approach to study the translation technique of the different Septuagint (LXX) books has been developed in Leuven by Bénédicte Lemmelijn and Hans Ausloos: the content- and context-related approach (Ausloos & Lemmelijn 2010). This approach takes content- and context-related criteria, such as Hebrew *hapax legomena* (Ausloos 2009; Ausloos & Lemmelijn 2008, 2012; Lemmelijn 2014; Verbeke 2008), Hebrew wordplay (Ausloos, Lemmelijn & Kabergs 2012; Kabergs & Ausloos 2012) and Hebrew jargon-defined vocabulary (Beeckman 2019, 2020; Lemmelijn 2008), as a starting point. As these semantic and stylistic situations might have posed difficulties for the LXX translators (Lemmelijn 2014:137), the analysis of these criteria and their Greek rendering in the LXX can shed more light on the different translation techniques.

Within the framework of this approach, several studies on the Greek rendering of Hebrew *hapax legomena* have been conducted (see *supra*). One of the more elaborate attempts is the (unpublished) doctoral dissertation of Elke Verbeke. In this work, Verbeke has analysed the Greek rendering of Hebrew absolute and non-absolute *hapax legomena* in Job. This examination has indicated that the LXX translator of Job dealt with hapaxes in a variety of ways, that is, by omission, transliteration, consistent rendering, association with a similar-looking word, contextual exegesis, approximate translation and paraphrasing (Verbeke 2011:369–416). However, she has only examined the *hapax legomena* and their Greek rendering in the dialogues between God and Job. Although the results of her analysis can be considered as an important contribution to the characterisation of the translation technique of LXX Job, an examination of the remaining *hapax legomena* in Job is necessary in order to obtain a more complete understanding of the translation technique of the LXX translator. Therefore, this article will analyse the Greek rendering of Hebrew absolute *hapax legomena* in the speeches of Job's friends, more specifically, those of Eliphaz, Bildad and Elihu. In the speech of Zophar, in chapter 11, only one *hapax* is found: מִפֶּה (Job 11:20).¹ However, in this

¹Verbeke (2011:115) recorded another *hapax* in her list, that is, נֹרָה (Job 11:17). However, because it is only recorded as a *hapax* in Lisowsky's work, it cannot be considered a *hapax legomenon*. See rules-of-thumb *infra*.

Note: Special Collection: Historical Thought and Source Interpretation, sub-edited by Johann Cook (Stellenbosch University).

study we are only interested in absolute *hapax legomena*, as they have been called by Immanuel Casanowicz, who made a distinction between absolute and non-absolute hapaxes. Absolute *hapax legomena* are words that are derived from any other existing Hebrew lexeme. This is in contrast to non-absolute *hapax legomena* that can be linked to an existing Hebrew lexeme. The *hapax* in the speech of Zophar cannot be considered as an absolute, but rather as a non-absolute *hapax legomenon*, as it is also recorded as such by Lisowsky and Greenspahn and not mentioned in Casanowicz's list (Verbeke 2011:115). Therefore, this *hapax* will not be discussed here. What will be discussed is the following.

Firstly, all the absolute Hebrew *hapax legomena* and their Greek rendering in the speeches of Eliphaz, Bildad and Elihu will be registered. Afterwards, these lexemes will be examined in order to discern whether the Greek rendering is because of the translation technique of the LXX translator, or rather to a different Hebrew *Vorlage* or to textual transmission of the Greek text. This way, this contribution aims at providing a more detailed description of the translation technique of LXX Job.

The registration of Hebrew absolute *hapax legomena* and their Greek rendering in the speeches of Eliphaz, Bildad and Elihu

Before registering the absolute Hebrew *hapax legomena* in the speeches of Eliphaz, Bildad and Elihu, it is necessary to indicate what we understand by the term 'absolute *hapax legomena*'. Derived from the Greek ἀπαξ λεγόμενα, *hapax legomena* are words that only occur once in a given corpus. Within the framework of this study, that takes the content- and context-related approach as a methodological approach, the corpus in question is the whole Hebrew Bible. Moreover, as already indicated in the introduction, this study examines the Greek rendering of Hebrew absolute *hapax legomena*.

Verbeke has made a list containing all the absolute and non-absolute Hebrew *hapax legomena* in the Hebrew Bible. This list is based upon four resources: BibleWorks, the works of Greenspahn (1984), Casanowicz (1904) and Lisowsky (1958). Next to an exhaustive list of hapaxes in the Hebrew Bible, Verbeke's list provides the reader with an overview on whether a *hapax* is labelled as an absolute or non-absolute *hapax* by a certain author (this distinction is not found in BibleWorks). As not every author agrees on whether a certain *hapax* is absolute or non-absolute, the following rules-of-thumb will be taken into consideration to determine whether a *hapax* is absolute or not.

Rule-of-thumb I: To discern whether a word is a *hapax* or not

1. The words that have been labelled as a *hapax* by one author and BibleWorks or by two, three or all of the

authors and/or BibleWorks can be regarded as a *hapax* (absolute or non-absolute)

2. Those that are only labelled as a *hapax legomenon* by only one author or by BibleWorks cannot be regarded as a *hapax*.

Rule-of-thumb II: To discern whether a *hapax* is absolute or non-absolute

1. If all three authors agree on whether a certain *hapax* is absolute, we can record it as such. For example, נתע (4:10) \Rightarrow a (Lis, Cas, Gr) \Rightarrow a
2. If two of the three authors agree on whether a certain *hapax* is absolute, we can record it as such. For example, פִּדְוֹר (15:24) \Rightarrow a (Lis, Cas) + na (Gr) \Rightarrow a
3. If the *hapax legomenon* is only attested by two of the three authors and they do not agree on whether the *hapax* is absolute or non-absolute, then the decision will be made in favour of Greenspahn being the younger one and incorporating and interpreting the earlier views on *hapax legomena*. For example, קִים (22:20) \Rightarrow na (Lis) + a (Gr) \Rightarrow a
4. If the *hapax* is only recorded by one of the authors and BibleWorks, the decision will be made in favour of this one author because BibleWorks does not make the distinction between absolute and non-absolute. For example, אהל (25:5) \Rightarrow a (Cas) \Rightarrow a.

Following Verbeke's list and the rules-of-thumb I have formulated *supra*, we arrive at 15 absolute *hapax legomena* in the speeches of Eliphaz, Bildad and Elihu.²

TABLE 1: Hebrew absolute *hapax legomena* in the speeches of Eliphaz, Bildad and Elihu and their Greek rendering in the LXX.

Verse	MT	LXX	DSS
4:10	נתע	σβέννουμι	/
4:18	תהלה	σκολιός	<i>lacuna</i> (4QtgJob [4Q157])
15:12	רום	ἐπιφέρω	/
15:24	פִּדְוֹר	πίπτω	/
15:27	פִּינָה	περιστόμιον (※)	/
15:29	מַנְהָה	σικιά	/
18:2	קָנִין	οὐ(?) παύω	סוף (11QtgJob)
18:3	טמה	σιωπάω	דמינא (11QtgJob)
22:20	קִים	ὑπόστασις (※)	<i>lacuna</i> (11QtgJob)
25:5	אהל	ἐπιφάσσω	וכי (11QtgJob)
33:20	זהם	οὐ μὴ δύνηται προσδέξασθαι	/
33:24	פדע	/	פצהי (11QtgJob)/ <i>lacuna</i> (4QJob* [4Q99])
33:25	רטפש	ἀπαλύνω	בשרי (4QJob* [4Q99])/lacuna (11QtgJob)
35:15	פֶשׁ	παράπτωμα (※)	<i>lacuna</i> (11QtgJob)
37:16	מַפְלֵשׁ	διάκρισις	א { } להלבש (11QtgJob)

However, as we are only interested in the translation technique of the Old Greek (OG) translator of Job, the passages marked with an asterisk (※) in Ziegler's critical edition (Ziegler 1982)

²As the *Biblia Hebraica Quinta* of Job, which is being prepared by Robert Althann, is forthcoming in 2021, MT is based upon the *Biblia Hebraica Stuttgartensia*: (Elliger & Rudolph 1977). For the LXX-version, the Septuagint text the Göttingen edition is used (Ziegler 1982). For the Dead Sea Scrolls (DSS), the book of Job is attested in 2QJob, 4QPaleoJob*, 4QJob* and 4QJob* (eds. Baillet, Milik & De Vaux 1962:71; eds. Skehan, Ulrich & Sanderson 1992:155–157; eds. Ulrich et al. 2000:171–180). A Targum version of Job (11QtgJob) (eds. Van der Ploeg & Van der Woude 1971; eds. García Martínez et al. 1998:79–180) and some fragments (4QtgJob) have also been found (Milik 1977:90; see also Puech 2020).

will not be discussed.³ Three verses containing a Hebrew absolute *hapax legomena* (Table 1) have a Greek counterpart that pertains to the asterisk material, that is, 15:27 (פִּינָה), 22:20 (קִים) and 35:15 (שֵׁפ). This leaves us with 12 absolute *hapax legomena* that will be evaluated in the next paragraph.

The evaluation of Hebrew absolute *hapax legomena* and their Greek rendering in the speeches of Eliphaz, Bildad and Elihu

Now that we have registered all the Hebrew absolute *hapax legomena* in the speeches of Eliphaz, Bildad and Elihu, we will evaluate them. In order to do so, we need to discern whether the rendering in the LXX is because of the translator's activity, to a diverging Hebrew *Vorlage* or to a later redaction during the process of the textual transmission of the Greek text.

Before we start the evaluation, one final methodological remark should be made. As the study of *hapax legomena* concerns the field of lexicography, multiple Hebrew and Greek lexica have been consulted.⁴ Nevertheless, one must keep in mind that the meaning ascribed to *hapax legomena* in lexica has often been influenced by different ancient translations of the Hebrew Bible such as the LXX itself (Ausloos 2013:294, 300; Muraoka 1991:212). As the meaning of Hebrew hapaxes is obscure and in many instances at least uncertain, lexicographers tend to look at the LXX translation in order to detract from their meaning. However, in the case of absolute hapaxes, although their meaning cannot be derived from an existing Hebrew root, scholars have often pointed at their affiliation with cognate languages such as Aramaic, Arabic and Syriac. If this is the case, their meaning can often be derived from these languages (as will be clear *infra*). Be that as it may be, in this study, we are not interested in *hapax legomena* as such, but rather, and in view of a more accurate characterisation of the translation technique of LXX Job, only in the way in which the LXX translator has dealt with them because they most probably have presented a difficult semantic situation (Ausloos 2013:326; Lemmelijn 2014:137; Verbeke 2011:lxii).

Job 4:10 (נתע)

MT	LXX
קוּ בַּעֲבָדָיו לֹא יִצְמְחוּ וּבְמַלְאָכָיו יִשְׁעִים תִּהְיֶה:	σθένος λέοντος φωνῆ δὲ λαϊνῆς γαυρίαμα δὲ δρακόντων ἐσβέσθη.
The roar of the lion, the voice of the fierce lion and the teeth of the young lions are broken. ⁵	The strength of the lion and the voice of the lioness and the pride of dragons were extinguished. ⁶

3. In Ziegler's text, there are some verses that belong to the asterisked material, which are left unmarked. Therefore, Gentry (1995:31) has provided an updated list of the asterisked material in LXX Job. The list of Gentry is taken as a point of departure to discern the asterisked material in LXX Job for this study.

4. For the English translation of the Hebrew and Greek lexemes, several lexicons and dictionaries have been consulted. For the Hebrew words: Gesenius (1921), Brown–Driver–Briggs (BDB) (1979), Clines (1993–2016) and Koehler and Baumgartner (1953). For the Greek words: Lust, Eynikel and Hauspie (LEH) (2015), Muraoka (2009), Liddell, Scott and Jones (1996:online) and Montanari (2015).

5. English translation of Hebrew text taken from NRSV.

6. English translation of the LXX taken from NETS. The LXX version of Job has been translated by Cox (2007:667–696).

The LXX presents a different reading than MT in this verse. The rendering of פִּינָה by δράκων is noteworthy. However, what is of interest here, is the rendering of the Hebrew *hapax* נתע by the Greek lexeme σβέννυμι ('to quench', 'to put out', 'to extinguish'). Scholars agree that נתע is an Aramaic form of the verb נתן ('to tear down', 'to break up', 'to demolish') (BDB 1979:683; Beer 1897:47; Seow 2013:397). Choon-Leong Seow classifies it amongst the Hebrew lexemes that have a root starting with נה, indicating 'elimination or removal' (Seow 2013:397). Therefore, the LXX's rendering of σβέννυμι, also denoting elimination or extinguishing, seems to be an adequate rendering.⁷ This lexeme is used throughout LXX Job to translate different Hebrew lexemes, that is, עלל (16:15), דעך (18:5, 18:6, 21:17), נכא (30:8), ספק (34:26) and כנע (40:12). According to Ziegler (1934:284), σβέννυμι is a favourite lexeme of LXX Job to render obscure or difficult Hebrew lexemes (see also Verbeke 2011:254). However, in this case, it seems that the LXX translator has understood the general meaning of the Hebrew *hapax*.

Job 4:18 (תהלה)

MT	LXX	4QtgJob
קוּ בַּעֲבָדָיו לֹא יִצְמְחוּ וּבְמַלְאָכָיו יִשְׁעִים תִּהְיֶה:	εἰ κατὰ παιδῶν αὐτοῦ οὐ πιστεύει κατὰ δὲ ἀγγέλων αὐτοῦ σκολιόν τι ἐπένοησεν.	ובמלאכיהו ישים ותבמלאכהו ישים
Even in his servants he puts no trust, and he charges his angels with error.	Whether he believes charges against his servants, who know, but he took note of any crookedness in his angels.	and against [his] angels [he] charges ⁸

The *hapax* תהלה ('error') is rendered by the Greek σκολιός ('crooked') in this verse. It is not preserved in 4QtgJob. Several scholars think that the *hapax* stems from the root הלל ('be foolish') (Beer 1897:27; Dhorme 1967:53).⁹ Apparently, Symmachus (σ') has understood it this way and rendered it by ματαιότητα (>ματαιότης; 'folly', 'vanity', 'uselessness'), a lexeme used abundantly in both LXX Psalms and Ecclesiastes and once in Proverbs. If those scholars are correct, then תהלה must be regarded as a non-absolute *hapax legomenon* instead of an absolute *hapax* although Greenspahn, Casanowicz and Lisowsky all agree that it is an absolute *hapax* (Verbeke 2011:114).

When the *hapax* can be understood as a derivative from the root הלל, the rendering of σ' reflects a more adequate translation than LXX's σκολιός. Nonetheless, the meaning of σκολιός pertains to the same semantic field as הלל, because crookedness can be considered a consequence of folly (Cox, forthcoming).¹⁰ Moreover, the LXX translator has rendered the second colon of this verse rather literally,

7. The term 'adequate rendering' used in this article denotes a (literal) rendering whereby the Hebrew word has been rendered with a corresponding Greek equivalent that shares the same meaning as the Hebrew.

8. Translated from the French translation of Puech (2020:138). Florentino García Martínez and Eibert Tigchelaar translate it differently: 'and with h[is] angels [...]' (García Martínez & Tigchelaar 2000:305).

9. The root הלל entails multiple meanings. The most commonly known is 'to sing, to praise, to shout exultingly' but it can also mean 'to act like a madman, folly' and 'to begin to shine' (see Job 25:5 *infra*) (Koehler & Baumgartner 1953:235–236).

10. I would like to express my gratitude to Claude E. Cox for giving me access to his unpublished manuscript of his SBL commentary on LXX Job.

providing a Greek equivalent for each Hebrew lexeme and thus more or less quantitatively representing the Hebrew:

וְבַמְלָאָהּ	δέ ἀγγέλων αὐτοῦ
עֵינַיִם	ἐπενόησεν
תִּהְיֶה	σκολιόν τι

The addition of the indefinite neutral pronoun τί ('any') which accompanies σκολιόν, is an addition by the LXX translator to emphasise that no single error or any crooked ways of God's angels are left unnoticed. By doing so, the LXX translation seems to stress the omniscience of God.¹¹

Job 15:12 (רזם)

MT	LXX
מה יקחם לבך ומה ירמזו עיניך:	τί ἐτόλμησεν ἡ καρδία σου ἢ τί ἐπήνεγκαν οἱ ὀφθαλμοὶ σου.
Why does your heart carry you away, and why do your eyes flash.	What did your heart dare, or what did your eyes set themselves upon.

The LXX represents the Hebrew quantitatively in this verse. The Hebrew *hapax* רזם ('to wink') is rendered here by the Greek verb ἐπιφέρω ('to bring', 'to put', 'to lay upon'). The verb רזם has possibly been derived from the Aramaic verb רמז ('to indicate [through a physical motion]', 'signal', 'to wink') (BDB 1979:931). Dhorme (1967:212–213) had postulated the retroversion ירומז as being the Hebrew *Vorlage* of the LXX. However, Seow (2013:714) argues that this retroversion is difficult to explain when taking all the manuscript evidence into account. He thinks that the LXX translator understood the Hebrew as 'to stare' (cognate to the Arabic *razama*) (Seow 2013:714). Thus, given Seow's argumentation and considering the LXX translator's quantitative representation in this verse, it is reasonable to assume that the LXX translator has rendered the Hebrew *hapax* with a corresponding Greek equivalent, that is, ἐπιφέρω.

Job 15:24 (כידור)

MT	LXX
כבעתהו צר ומצוקה תתקפהו כמלךו עליד לכידור:	ἀνάγκη δὲ καὶ θλίψις αὐτὸν καθέξει ὡς περ στρατηγὸς πρωτοστάτης πίπτων.
Distress and anguish terrify them; they prevail against them, like a king prepared for battle.	And distress and anguish will take hold of him; he will be like a general falling in the front rank.

So far, no one has given a well argued answer to the question why the translator has opted for πίπτω as a rendering of כידור. The *hapax* might have an affiliation with the Syriac (*kd̄r*, 'to disturb'), Akkadian (*kadāru*, 'to be overbearing, arrogant, spirited'; *kadru*, 'aggressive'; *kadrūtu*, 'aggressiveness') or Arabic (*kadara*, 'to throw down, to disturb, afflict, distress') (Seow 2013:719). Therefore, Seow concludes that the term 'should probably be understood to mean "aggression, attack, combat"' (Seow 2013:719; see also BDB 1979:461; Clines 1998:391). Claude E. Cox argues that the LXX translator

11. That the LXX translator of Job made some theological nuances with respect to the figure of God is also observed by Johann Cook (Cook & Van der Kooij 2012:182–183).

has interpreted the *hapax* in the same line of thought as the (Rabbinic) Targum's interpretation, that is, 'for battle', 'to die in battle' (Cox forthcoming).¹²

In MT, distress and anguish are the subject of this verse. They are the ones that prevail against the wicked or impious such as a king ready for battle. However, in contrast to MT, the subject of the verse in the LXX remains the impious as introduced at the beginning of the cluster (15:20). Thus, although the LXX renders the verse differently and perhaps even struggled to translate the *hapax*, it seems that he has opted for a rendering that was fitting with the context of the verse. This kind of contextual rendering is a technique favoured by the LXX translator to render Hebrew *hapax legomena*, as has been demonstrated by Verbeke in her dissertation (Verbeke 2011:390–394).

Job 15:29 (מנלה)

MT	LXX
לא יבשר ולא יקום סילו ולא יזקה לארץ מנלה:	οὔτε μὴ πλουτισθῆ οὔτε μὴ μείνη αὐτοῦ τὰ ὑπάρχοντα οὐ μὴ βάλη ἐπὶ τὴν γῆν σκιάν.
They will not be rich, and their wealth will not endure, nor will they strike root in the earth.	Neither shall he ever become rich, nor shall his possessions last. He shall not cast a shadow upon the ground.

The LXX renders the *hapax* מנלה by the Greek noun σκιά. According to Seow, מנלה either means 'possession' or 'root' (Seow 2013:722–723). Within the context of the verse in which there is an emphasis on plant metaphors (see e.g. De Joode 2018:101–102), the translation of 'roots' seems to make more sense. Looking at the LXX, one might think that the metaphorical language pertaining to plants in the Hebrew text of 15:28–35 has not been preserved in the LXX verse under discussion. However, the LXX does preserve the metaphor, because a tree can cast a shadow upon the ground (this has been interpreted as such by Olypiodorus [Diaconus] in his *Commentarii in Job* [see Hagedorn & Hagedorn 1984:142–143]). Gerleman (1946:38–39) asserted that the translator has been influenced by the ancient tradition that the dead do not cast any shadow, which is attested in the writings of Plutarch.

Moreover, it seems that the LXX translator has tried to fit this verse into the context of the first colon of the next verse (15:30) which reads:

MT	LXX
לא יסורו מניחשך	οὐδὲ μὴ ἐκφύγη τὸ σκότος.
They will not escape from darkness.	Nor shall he escape darkness.

In this verse, the noun σκότος ('darkness') is used as a rendering of חשך ('darkness'). Both lexemes, σκότος and σκιά, pertain to the same semantic domain and are even orthographically closely linked to one another. Moreover, σκότος and σκιά often appear as a word pair in the LXX in general (e.g. LXX Ps 106:10, Ps 106:14, Ob 9:79, Jr 13:16) and even occur three times in LXX Job (3:5, 12, 22; 28:3). Thus, the choice to render the obscure word מנלה by the Greek

12. The Aramaic reads: 'Distress and anguish terrify him; they surround him like a king who is ready for the *bier*'. Some variants read '... like one who is ready to be surrounded by legions' (Mangan 1991:47). Original italicisation.

lexeme *σκαία* might have stemmed from the immediate context of 15:29, that is, 15:30, in order to create the word pair *σκότος/σκαία*. Once more, as was the case in 15:24 *supra*, the Hebrew *hapax* has been rendered by means of contextual exegesis. This has been generally overlooked by commentators.

Job 18:2 (קָנַץ)

MT	LXX	11QtgJob
עד־אָנְהוּ תְשִׁימוֹן קִנְצִי לְמִלִּין חֲבִינֵי וְאֶתֶר נְדָבָר: How long will you hunt for words? Consider, and then we shall speak.	μέχρι τίνος οὐ παύσῃ ἐπίσχεσ ἵνα καὶ αὐτοὶ λαλήσωμεν. How long before you stop? Hold back, so that we too can speak.	עד אמת־י תשוא סוף למלא] [Whe]n will you stop speaking? [

The *hapax* under discussion is קָנַץ. Commentators have offered different translations for this word, for example, ‘fettters’, ‘bonds’, ‘shackles’ (Dhorme 1967:257), ‘traps’, ‘snares’ (Schultens 1737:435 [Lat. *laqueus*]; BDB 1979:890) and ‘end’ (Koehler & Baumgartner 1953:846; Seow 2013:779, see 779–780 for a full discussion). 11QtgJob has סוף (‘stop’) for MT’s קָנַץ. Moreover, the noun קָנַץ can ‘be regarded as an equivalent of קָץ’ (‘end’) (Dhorme 1967:257; see also Clines 2010:271; Koehler & Baumgartner 1953:844). Taking this into account, it is highly plausible that the *hapax* indeed means ‘end’ or ‘stop’.

The editors of DJD XXIII (eds. García Martínez et al. 1998:91) noted that *παύση* is LXX’s rendering of 11QtgJob’s תשוא and MT’s תְשִׁימוֹן (< שים ‘to set’, ‘to put’). However, it seems that the LXX translator has opted to render תְשִׁימוֹן קִנְצִי by οὐ παύση. The translation of the first stich in Greek reads (literally): ‘How long will you not stop?’, a question from Bildad following the extensive speech of Job, requesting him to stop speaking so that Job’s friends can say something as well. It is hard to discern whether the translator rendered קָנַץ or שים by *παύση*. Nevertheless, given the fact that תְשִׁימוֹן קִנְצִי denotes ‘to put a stop’, the translator’s choice to render it with *παύση* (‘to stop’) offers a very adequate rendering.

Job 18:3 (טָמֵא)

MT	LXX	11QtgJob
מדוע נחשבונו כבהמה טִמְאֵינוּ בְעֵינֵיכֶם: Why are we counted as cattle? Why are we stupid in your sight?	διὰ τί ὡσπερ τετράποδα σεσωπηκάμεν ἐναντίον σου. Why have we, like quadrupeds, been silent before you?	[לב] עירא דמינא] [] do we resemble [cattle]? [

In Job 18:3, the Greek *σιωπάω* (‘to be silent’) for the Hebrew *hapax* טָמֵא (‘to be unclean’) of MT can be explained on the basis of the fragmentary attestation of this verse in 11QtgJob. 11QtgJob attests דמינא, which reflects a form of the verb דמה (‘to resemble’) (eds. García Martínez et al. 1998:91). Next to the meaning ‘to resemble, to be like’, the verb דמה can also denote ‘be silent, still’ (BDB 1979:199; Koehler & Baumgartner 1953:213). Moreover, the LXX translator of Job uses *σιωπάω* in 29:21 and 30:27 to render the Hebrew דָמָם, which is a parallel form of דמה (Koehler & Baumgartner 1953:213). Given the

11QtgJob fragment, the Hebrew *Vorlage* of the LXX probably had a reading that preserved a form of דמה whereby the LXX translator interpreted as denoting ‘be silent, still’.

Thus, it seems that the LXX translator offers an adequate rendering of the Hebrew verb that was attested in his *Vorlage*, that is, דמה, which is attested in MT as טָמֵא. How this specific reading of MT came about reaches beyond the scope of this article, because we are solely interested in the LXX translator’s attitude towards his parent text.

Job 25:5 (אָהַל)

MT	LXX	11QtgJob
קו עד־רָם וְלֹא אֶהְיֶה לְכֹכְבִּים לֹא־זָפוּ בְעֵינָיו: If even the moon is not bright and the stars are not pure in his sight.	εἰ σελήνη συντάσσει καὶ οὐκ ἐπιφάσκει ἄστρα δὲ οὐ καθαρὰ ἐναντίον αὐτοῦ. If he instructs the moon, then it does not shine, and the stars are not pure before him.	[זכ] וכוכביא לא] [] pure, and the stars are not [

The Hebrew *hapax* אָהַל in Job 25:5 is to be understood as a derivative of the Hebrew root הלל (‘to shine’) (BDB 1979:14; Clines 1993:142; Dhorme 1967:369). Just as in Job 31:26 and 41:10, the LXX translator rendered this verb with *ἐπιφάσκει* (‘to shine’), which only occurs in the LXX of Job (in the NT, it is only used once, namely in Eph 5:14), thus providing an adequate translation. Because this *hapax* might be linked to an existing Hebrew root, we cannot label it as an absolute *hapax legomenon* (as is the case in 4:18 *supra*).¹³

Job 33:20 (בָהוּז)

MT	LXX
וְהִקְתוּ סִינֵי לֶחֶם לְנַפְשׁוֹ מֵאֵל מֵאֵל: So that their lives loathe bread, and their appetites dainty food.	πᾶν δὲ βρωτῶν σίτου οὐ μὴ δύνηται προσδέξασθαι. And he shall not be able to take any edible bit of food.

The LXX only attests the first stich of verse 33:20. Stich b, that is, καὶ ἡ ψυχὴ αὐτοῦ βρωθὸν ἐπιθυμήσει, is marked with an asterisk and is not part of OG.

The Greek text of the LXX offers a completely different translation of the Hebrew text attested in MT. Concerning the *hapax* under examination, that is, הָהָם (which means ‘be foul, loathsome’, from the Aramaic הָהָם ‘foul’ [BDB 1979:263]), Dhorme (1967:498) and Beer (1897:211) argued that the Hebrew text originally read וְהִקְתוּ instead of וְהִקְתוּ. Nonetheless, the LXX rendering does not provide an exact quantitative representation of the Hebrew of MT, but rather a paraphrastic one because the *hapax* in 33:20 is represented by the phrase οὐ μὴ δύνηται προσδέξασθαι (he will not be able to take or receive). If the translator paraphrased the Hebrew, he understood the *hapax* as ‘something that cannot be eaten’. The negative connotation of הָהָם is thereby represented by the construction οὐ μὴ. However, it

13. The authors who worked on the registration of hapaxes in the Hebrew Bible do not agree whether *אהל* is a *hapax* or not. Only BibleWorks and Casanowicz label it as such (the latter labels it as an absolute *hapax*) (Verbeke 2011:117).

is hard to tell whether the LXX translator has provided a paraphrastic rendering of his Hebrew *Vorlage*, which might have resembled MT or whether his *Vorlage* has actually differed from MT.

Job 33:24 (פדע)

MT	LXX	11QtgJob	4QJob ^a
וַיִּמְצֵא אֶת־בְּנֵי־הַמָּוֶה מִן־הַבְּרִיחַ וַיִּמְצֵא אֶת־הַמָּוֶה לְקָרִי:	ἀνθέξεται τοῦ μὴ πεσεῖν αὐτὸν εἰς θάνατον ἀνανεώσει δὲ αὐτὸ τὸ σῶμα ὡσπερ ἀλοιφήν ἐπὶ τοίχου τὰ δὲ ὄστᾶ αὐτοῦ ἐμπλήσει μυελοῦ.	וַיִּאמֶר פְּדֵהוּ מִן־חַבַּן [ת אִשָּׁה יִשְׁנַקְנָה וַיִּתְמַלֵּין [גרמויה מוח]	[וַיִּתְנֶנּוּ וַיִּיאַמְרוּ פְּדֵהוּ מִרְדַּת שַׁחַת מִצְאָתִי כִכְרִי]
And he is gracious to that person, and says, 'Deliver him from going down into the Pit; I have found a ransom.'	He will provide support so that he does not fall into death and renew his body like paint does a wall and fill his bones with marrow.'	And he will say: 'Save him from ha[rm] of fire strangles him. And [his bones] will be filled [with marrow.]'	And he is gracious to that person, and says, 'Deliver him from going down into the Pit; I have found a ransom.'

According to Seow (2011:168), the Hebrew *hapax* פדע should be read as פדע ('to loose', 'to free', and also possibly 'ransom'), because this is attested in MSS^{Kenn 206,454} and because the *dalet* and *reš* were 'graphically similar [...] in the paleo-Hebrew script'. The *hapax* is attested in MT; in 4QJob^a there is a *lacuna*. 11QtgJob, on the other hand, records פדעו which means 'to deliver', 'to save'.¹⁴ According to the editors of DJD, this reading is based upon the reading of MT's פדעו as פדהו (eds. García Martínez et al. 1998:132; see also Heater 1982:105).

The LXX provides a completely different reading from MT. One might think that the translator has elaborated this verse, because the Hebrew text is considerably shorter than the Greek one. However, the suggestion of the editors of DJD that 11QtgJob probably lacks two hemistichs that are missing in MT, implies that it might have reflected the Hebrew *Vorlage* of the LXX translator (eds. García Martínez et al. 1998:132). Even if this is the case, the LXX does not provide a rendering for פדעו (MT) or פדהו (11 QtgJob).¹⁵ In this verse, it seems that the LXX translator has ignored the *hapax* (perhaps because he did not know its meaning). Instead, he has elaborated on the negative image of flesh and bones that is introduced in 33:21 and contrasted it with a positive image in 33:24b:

33:21 (LXX)	33:24b (LXX)
ἔως ἂν σαπῶσιν αὐτοῦ αἱ σάρκες καὶ ἀποδείξῃ τὰ ὄστᾶ αὐτοῦ κενά.	δὲ αὐτοῦ τὸ σῶμα ὡσπερ ἀλοιφήν ἐπὶ τοίχου τὰ δὲ ὄστᾶ αὐτοῦ ἐμπλήσει μυελοῦ.
Until his flesh rots and he shows his bones to be bare.	And renew his body like paint does a wall and fill his bones with marrow.

This contrasting elaboration of the image of the renewed body and bones is absent in MT's version of 33:24.

14. Clines (2007:655) and BDB (1979:804) translated פדע with 'deliver'.

15. Contrary to Homer Heater, who believes it has been rendered in the LXX (Heater 1982:105). However, he does not indicate the Greek equivalent of the Hebrew *hapax*.

Job 33:25 (רשפ)

MT	LXX	11QtgJob	4QJob ^a
רָשַׁף בְּעֵרָו מִנְעָר יָשׁוּב לִימֵי עֲלֹמָיו:	ἀπαλυνεῖ δὲ αὐτοῦ τὰς σάρκας ὡσπερ νηπίου ἀποκαταστήσει δὲ αὐτὸν ἀνδρωθέντα ἐν ἀνθρώποις.	מִן עוֹלָם וְחַב לְיוֹמִי עֲלִימָ[וְהָ]	[] בשרו מנער [] ישוב לימי עלומיו
Let his flesh become fresh with youth; let him return to the days of his youthful vigour.	And will make his flesh soft like an infant's and restore him full-grown amongst people.] than that of a youth, and he will return to the days of [his] youth[th].	[] his flesh become fresh with youth; [let him return to the days of his youthful vigour.]

In 4QJob^a, the last letters of the first word are attested, although they are barely readable. The editors of DJD XVI suggest that it cannot be a *šin*, but rather a *reš-waw* construction (eds. Ulrich et al. 2000:174). Thus, 4QJob^a probably had a different reading for MT's רשפ. However, because the complete word is not attested, it is hard to discern what the word might have been. It might as well be a dittography of בשרו.

The LXX renders רשפ by ἀπαλύνω ('to soften'). The verb ἀπαλύνω only occurs three times in the LXX, that is, 2 Kings 22:19, Psalms LXX 54:22 and Job 33:25, as a rendering of the Hebrew verb רכך ('to be tender'). Seow (2011:169–170) argues that it is possible that the *reš* is a dittograph and that the root is טפס ('be unsensible', 'unfeeling' and often also translated by 'be fat') (see also BDB 1979:936), which also occurs in Ps 119:70 (LXX 118:70) (see also Dhorme 1967:503 and especially Altschüller 1886:212 who introduced this idea). However, one might argue that the fragmentary 4QJob^a attests *khaf-waw* and that the *Vorlage* of the LXX translator recorded רכך as is the case in Ps 55:22 (MT). When looking at the fragment (i.e. plate 1116, fragment 5) itself, one can detect a little dot of ink under the *waw* that might reflect the presence of a *khaf*, certainly when compared with other *khafs* by the scribe's hand (see e.g. Job 32:4 in 4QJob^a). Thus, the LXX's *Vorlage* might have attested רכך and consequently, the LXX translator provided an adequate rendering (i.e. ἀπαλύνω).

Job 37:16 (מפלש)

MT	LXX	11QtgJob
הֲתַדַּע עַל־מַפְלְשֵׁי־רֵעֶב מְפַלְאוֹת תַּמִּים דַּעִים:	ἐπίσταται δὲ διάκρισιν νεφῶν ἐξάισια δὲ πτῶματα πονηρῶν.	[התנדע להלבש {ו} א עננה גבורה]
Do you know the balancings of the clouds, the wondrous works of the one whose knowledge is perfect.	And he understands the division of the clouds and the extraordinary falls of the wicked.	[Do you know how to clothe His cloud with might?

The Hebrew *hapax* מפלש has been rendered by the lexeme διάκρισις ('separation', 'dissolution') into Greek. MT attests a plural form whereas the LXX has a singular form. Only Greenspahn records this *hapax* as an absolute *hapax* (it is not present in Casanowicz's list and Lisowsky labels it as a non-absolute *hapax*). However, the meaning of the *hapax* can be derived from the root פלס ('to smooth', 'to level', 'to balance') (cfr. BDB 1979:814; Clines 2001:432). Therefore, just as was the case in 4:18 (תְּהַלֵּךְ) and אהל (Job 25:5) *supra*,

this absolute *hapax* cannot be labelled as such. It should rather be considered as a non-absolute *hapax*.

Dhorme (1967:568) had suggested that the LXX read מַפְלֵג (‘to make distinct’, ‘to divide’). This might be plausible because, as Cox argues (Cox forthcoming), the derivative verb of διάκρισις, that is, διακρίνω (‘to decide’, ‘to judge’, ‘to distinguish’), is also used in Leviticus 24:12 as a rendering of פָּרַשׁ. By doing so, LXX provided an adequate rendering of the Hebrew lexeme. Moreover, in 37:15, the LXX refers to the creation of light out of darkness (φῶς ποιήσας ἐκ σκοτόυς), which entails a division (i.e. light vs. darkness). Thus, the choice of the translator to render מַפְלֵג by διάκρισις also reflects his stylistic attention for the literary context.

Conclusion

Having analysed the Greek rendering of the Hebrew absolute *hapax legomena* in the speeches of Eliphaz, Bildad and Elihu in LXX Job, we can draw the following conclusions with regard to the translation technique of the LXX translator:

1. Most hapaxes have been rendered with an adequate Greek equivalent by the LXX translator. This is the case for the *hapax legomena* in 4:10 (נָתַע), 4:18 (תִּהְיֶה), 15:12 (רָזַם), 18:2 (זָנַק) and 25:5 (אָהַל). It must be observed that the examination has indicated that three of the hapaxes, which were considered absolute at the outset of this study on the basis of earlier research, that is, תִּהְיֶה (4:18), אָהַל (25:5) and מַפְלֵג (37:16), should actually be labelled non-absolute *hapax legomena*, because our analysis indicated that their meaning might be derived from an existing Hebrew root.
2. Some Hebrew hapaxes have been rendered into Greek by drawing upon contextual exegesis, that is, כִּידוֹר (15:24), מִנְיָה (15:29) and in a lesser degree also מַפְלֵג (37:16). This observation confirms the results of Verbeke on the Greek rendering of Hebrew *hapax legomena* in the speeches of Job and God. Therefore, it can indeed be considered a specific trait of the LXX translator of Job.
3. In one instance, the LXX does not provide a Greek rendering for the Hebrew *hapax*, that is, פָּדַע (33:24). Instead, he contrasted the image of flesh and bones in 33:21 and thereby enhanced its imagery.
4. In two cases, that is, טָמָה (18:3) and רִטְפֹשׁ (33:25), the LXX translator of Job probably had a Hebrew *Vorlage* that differed from the text attested in MT. In 33:20, the extant textual material does not allow any decision on whether the LXX translator paraphrased the Hebrew text or whether it rather had a diverging *Vorlage*.

These results point toward a translator who employed a variety of techniques to render possibly difficult Hebrew words. Although some of these words might have posed a challenge, the LXX translator never resorted to transliteration and has always aimed at providing an intelligible rendering of the Hebrew text, for example, by employing contextual exegesis.

This article has only examined the absolute Hebrew *hapax legomena* in the speeches of Job’s friends. An examination of the non-absolute Hebrew *hapax legomena* in the same parts of LXX Job might shed even more light on its translation technique. Moreover, an analysis of the Greek rendering of Hebrew hapaxes in the prose sections in Job (prologue chapters 1–2 and epilogue 42:7–16) might also be worth examining in order to see whether the translator has rendered the prose sections differently than the poetic sections. Step by step, we are approaching a more nuanced and complete image on how the LXX translator rendered his Hebrew *Vorlage* into Greek.

Acknowledgements

The author would like to express his gratitude towards Johann Cook for inviting him to submit an article to the Special Collection of HTS. He also wants to thank the participants of the Groningen-Leuven-Oxford Network Conference ‘Hebrew Bible and Jewish Antiquity’ 08–09 March 2021, where this article was presented, for their remarks, as well as the anonymous reviewers. A last word of gratitude goes to his promoters, Prof. Dr Hans Ausloos (UCLouvain) and Prof. Dr Bénédicte Lemmelijn (KU Leuven) for their helpful suggestions.
