

Errata

In the article 'An evaluation of changes over time in serum creatine kinase activity and C-reactive protein concentration in dogs undergoing hemilaminectomy or ovariohysterectomy' by Nevill B, Leisewitz A [L], Goddard A, Thompson P [N] that appeared in the *Journal of the South African Veterinary Association* 81(1): 22–26 (March 2010), the y-axis label should have read 'CRP concentration (mg/l)', and in the captions of both Figures 3 and 4 '(±SD)' should have qualified the 'Mean', as in the figure and in the two captions below:

Fig. 3: Mean (±SD) CK values for each time point for both spay and spine groups. The dashed line represents the upper limit of the OVAH reference interval. Time 0 is the immediate postoperative time point. The means were significantly different at all time points between the 2 groups except preoperatively.

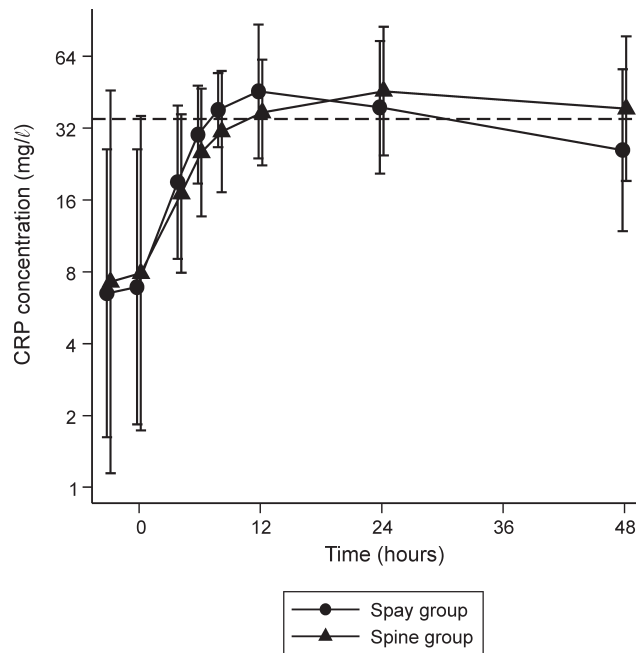

Fig. 4: Mean (±SD) CRP values for each time point for both spay and spine groups. Time 0 is the immediate postoperative time point. The dashed line represents the upper limit of the OVAH reference interval. There was no significant difference between the means of the 2 groups at any time point.
